

counting the number A of transmission operations; and
calculating the costs for the end customer on the basis of the number A of
the transmission operations.

9. (New) The method as defined in claim 8, wherein the data transmission
between sensor S1, S2, S3 and the process control system PLS takes place in line-conducted
fashion, using, for example, a data bus system DBS.

10. (New) The method as defined in claim 8, wherein the data transmission
between sensor S1, S2, S3 and the process control system PLS takes place by radio.

11. (New) The method as defined in claim 8, wherein the number A is stored in
the sensor S1, S2, S3.

12. (New) The method as defined in claim 9, wherein the number A is stored in
the sensor S1, S2, S3.

13. (New) The method as defined in claim 10, wherein the number A is stored in
the sensor S1, S2, S3.

14. (New) The method as defined in claim 8, wherein the number A is stored in the
process control system PLS.

15. (New) The method as defined in claim 9, wherein the number A is stored in the
process control system PLS.

16. (New) The method as defined in claim 8, wherein the measured values are
transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter
manufacturer, to which data base the end customer likewise has access over the internet, and
wherein the number of database access operations by the end customer to this database is

counted.

17. (New) The method as defined in claim 9, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted.

18. (New) The method as defined in claim 10, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted.

19. (New) The method as defined in claim 11, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted.

20. (New) The method as defined in claim 12, wherein the measured values are transmitted over the internet from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted.

21. (New) The method as defined in claim 8, wherein the measured values are

transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted.

22. (New) The method as defined in claim 9, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted

23. (New) The method as defined in claim 10, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted.

24. (New) The method as defined in claim 11, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is counted.

25. (New) The method as defined in claim 12, wherein the measured values are transmitted by radio from the sensor S1, S2, S3 to a database at the field transmitter manufacturer, to which database the end customer likewise has access over the internet, and wherein the number of database access operations by the end customer to this database is
